

Starting an Oracle Forms Application Using Microsoft Edge

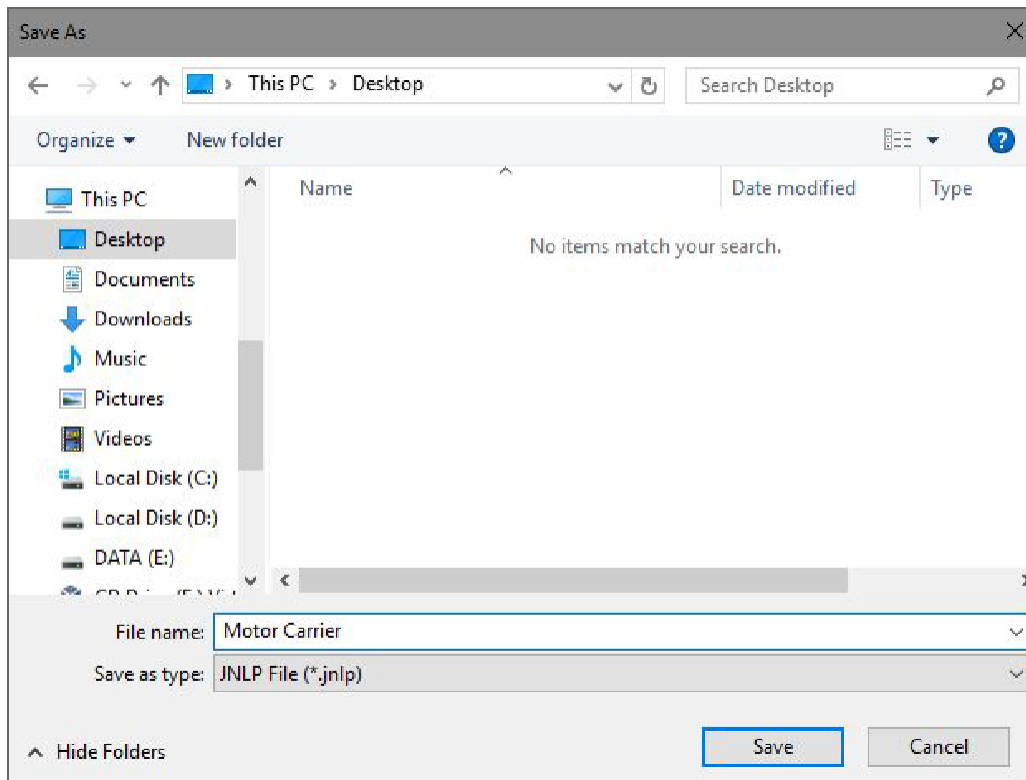

Microsoft Edge is not well-suited for starting Oracle Forms applications. A better approach is to use Edge to create a file which you will save on your PC. Double-clicking this file will launch the app.

- Go to <https://apps.udot.utah.gov>
- Click on the link for your application
- Edge will ask if you want to save a file named **frmservlet.jnlp**
- Choose **Save as**

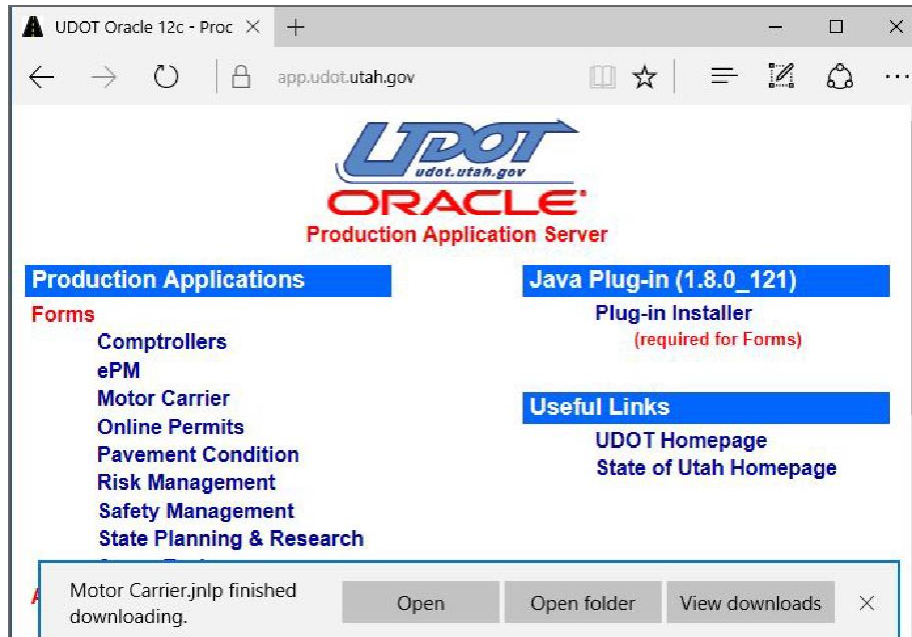

Starting an Oracle Forms Application Using Microsoft Edge

- In the **Save As** window, select the **Desktop**.
 - In the **File name:** box, change the name to match your application. For example:
Motor Carrier
 - Leave the **Save as type:** field set to **JNLP File (*.jnlp)**
 - Click **Save**

- Now Edge will ask what you want to do with the downloaded file. Click **Open**. This will open your application, but in the future, you'll use the downloaded file (see *next page*).

Starting an Oracle Forms Application Using Microsoft Edge

The next time you launch your application, you may skip using Edge.

- On your Desktop, find the file you saved.
- Double-click it
